

Creating innovative software to optimize computing performance

PRODUCT OVERVIEW

SQL SENTRY **PerformanceAdvisor**®

Performance Monitoring and Tuning

SQL SENTRY **EventManager**®

Server Job Schedule and Alert Management

SQL SENTRY **PlanExplorer**

SQL Query Optimazation Made Easy

SQL SENTRY **FragmentationManager**

SQL Server Index Analysis & Defrag

Combine our award-winning
products for complete
performance monitoring
and optimization, and cost
effective solutions.

SUITE DEALS

SQL SENTRY **POWER SUITE PLUS**

Power Suite PLUS provides the most complete performance monitoring and optimization solution for both Microsoft SQL Server and Windows.

SQL SENTRY **POWER SUITE**

The SQL Sentry Power Suite provides a complete performance monitoring and optimization solution for Microsoft SQL Server.

SQL SENTRY **BI SUITE**

The SQL Sentry BI Suite provides a complete performance monitoring and optimization solution for the entire Microsoft BI platform.

SQLSENTRY PerformanceAdvisor®

PERFORMANCE MONITORING AND TUNING

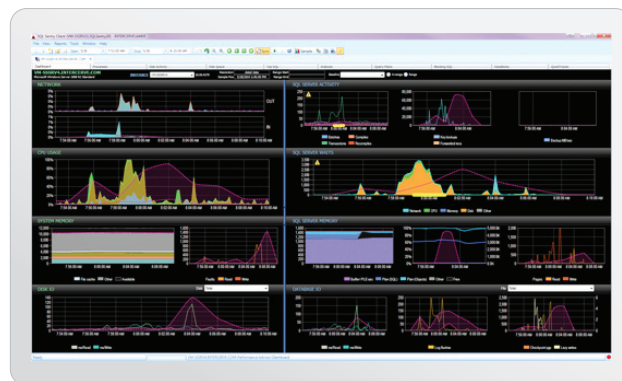

Unparalleled insight, awareness and control over the true source of performance issues.

With specific products for SQL Server, Analysis Services, and Windows, Performance Advisor monitors relevant metrics and provides unmatched insight into poorly performing SQL, blocks, deadlocks, storage and I/O bottlenecks, as well as system resource usage. Its ground-breaking features are designed with the singular goal of simplifying the process of performance tuning and optimization.

Performance Advisor for SQL Server

- SQL Server + Windows Performance Dashboard
- Real-Time & Historical Performance Analysis
- Top SQL Analysis Highlights Heaviest Queries
- Graphical Blocking and Deadlock Analysis
- SQL Server AlwaysOn Management and Monitoring

Performance Advisor for Analysis Services

- Powerful SSAS Performance Dashboard
- Innovative Workload and Bottleneck Profiling
- Capture of all Heavy MDX, XMLA and DMX
- Alerting and Response System for SSAS Commands and Runtime Deviations
- SSAS Cache and Storage System Monitoring

Performance Advisor for Windows

- Service & Process-level Metrics
- Processor Groups + NUMA Support
- Historical performance of processes and services
- Processes are auto-correlated with services
- Related processes are organized into friendly groups, with individual and group level metrics

SQLSENTRY EventManager®

SERVER JOB SCHEDULE AND ALERT MANAGEMENT

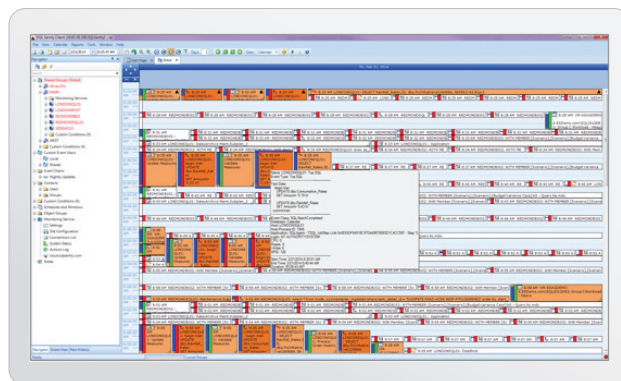

Ultimate scheduling, alerting and response system for optimizing schedule performance of database servers

With specific products for SQL Server, Windows, SharePoint and Oracle, Event Manager provides DBAs with "Outlook-style" visibility and functionality for managing SQL Agent jobs, Windows Tasks, and Oracle jobs in increasingly complex cross-platform environments. Unlike most other scheduling products, Event Manager does not require an agent to be installed and managed on each server.

Event Manager for SQL Server

- Visual display of SQL Agent jobs along with other events across the enterprise
- Alerting and Response System for over 90 conditions including Output Content Matches
- Advanced Chaining and Queuing features

Event Manager for Windows

- Unprecedented visibility and manageability for the Windows Event Log and Task Scheduler
- Alerts and Notifications for events impacting critical services and applications
- Advanced Chaining and Queuing features

Event Manager for SharePoint

- Unparalleled visibility into exactly when timer jobs run
- Tools to easily assess which timer jobs are colliding more frequently
- Alerts and Notifications for timer job failures, runtime deviations and more

Event Manager for Oracle

- Calendar view of DBMS Jobs, Manager Jobs, Scheduler and other Events
- Tools to manage intricate and voluminous job streams
- Support for geographically distributed deployments and configuration of powerful cross-server event chains

SQLSENTRY® PlanExplorer

SQL QUERY OPTIMIZATION MADE EASY

Quickly get to the root of tough SQL Server query optimization issues.

With both a free and PRO version, Plan Explorer builds upon the graphical plan view in SQL Server Management Studio (SSMS) to make query plan optimization more efficient. It is a lightweight standalone app that contains many of the plan analysis features introduced in SQL Sentry v6, and does not require a collector service or database.

Why Go **PRO**?

Features:

- Optimized zoom controls and layout algorithms
- Quickly compare different statements
- Spot scan operations and actual vs. estimated discrepancies
- See every column used and its associated operation and index
- Easily compare different versions of your query within a session **PRO**
- Compare query tuning sessions side by side in a single instance **PRO**
- Easily trace the source of statements **PRO**
- Open and troubleshoot deadlock files from any source **PRO**

SQL Sentry® *Fragmentation Manager*

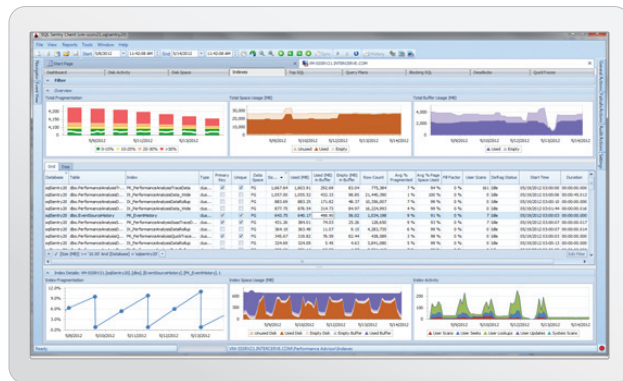

SQL SERVER INDEX ANALYSIS & DEFRAG

Dramatically improves the manageability and visibility of index fragmentation across the SQL Server enterprise

Fragmentation Manager helps you make good decisions about how and when to defragment. You can easily set up an environment-wide schedule to automate defragmentation operations, while allowing the flexibility to customize the schedule and other specific instances, databases, tables, and even individual indexes. Fragmentation Manager will also allow you to defragment indexes faster than ever before via support for multiple concurrent operations.

Automated Defrag

- Quickly and easily set up automated defrag schedules
- Set specific schedules for different servers and databases, down to the individual table or index level as needed
- With full support for partitioning sliding window scenarios, selectively defrag only the max partition, or all others
- Stay informed about the status of your defrag operations with three alerting conditions

Fragmentation Reports

- Displays index-related statistics, from the computer level down to the individual index level
- Displays the state of fragmentation informing you about how and when to defrag your indexes, adjust fill factors, or even change index definitions
- Multiple charts show used and wasted space, for both disk and buffer, at the table and index level
- Index Space Usage shows you exactly how much of an index is on disk and in buffer over time, and how much disk and buffer space is wasted due to non-full pages

Integration with Performance Advisor * allows you to assess the impact of fragmented indexes and tables on server and query performance.

Performance Advisor is required to install Fragmentation Manager.

Defrag Performance

- By allowing more than one concurrent defrag operation, Fragmentation Manager can dramatically speed up your defrag process, thereby reducing the maintenance window required for defrag
- With the Performance Advisor dashboard and Disk Activity views, you can easily assess the performance impact of increasing the concurrent defrag operations
